

## Cleaved PARP Polyclonal Antibody

<b>CATALOG #:</b>	3140-100
<b>AMOUNT:</b>	100 µg
<b>LOT #:</b>	_____
<b>HOST:</b>	Rabbit
<b>IMMUNOGEN:</b>	Synthetic peptide correspond to the N-terminal residues of the catalytic domain of human PARP
<b>SPECIES REACTIVITY:</b>	Human

### FORMULATION:

100 µg (0.2 mg/ml) affinity purified rabbit polyclonal anti-cleaved PARP antibody in phosphate-buffered saline (PBS) containing 50% glycerol, 1% BSA, and 0.02% thimerosal.

### STORAGE CONDITIONS:

Store at -20°C. For long term storage, aliquot and freeze at -70°C. Avoid repeated freeze/thaw cycles.

### DESCRIPTION:

PARP, a 116 kDa nuclear poly (ADP-ribose) polymerase, is a highly conserved nuclear enzyme implicated in DNA repair and in the apoptosis response of cells. This protein can be cleaved by many caspases *in vitro* and is one of the main cleavage targets of caspase-3 *in vivo*. The cleavage occurs between ASP214 and Gly 215, which separates PARP's N-terminal DNA binding domain (24 kDa) from its C-terminal catalytic domain (89 kDa). It has been shown that cleavage of PARP facilitates cellular disassembly and inhibition of PARP cleavage attenuates apoptosis *in vitro*.

### SPECIFICITY:

The antibody recognizes only the large fragment of PARP (89 kDa) and does not react with the full length PARP. Camptothecin treated Jurkat cell lysate can be used as a positive control.

### APPLICATION AND USAGE:

Western blot analysis (0.5-4 µg/ml) and immunocytochemistry (10-20 µg/ml). However, the optimal concentrations should be determined individually.

**FOR RESEARCH USE ONLY! Not to be used in humans.**
