BACKGROUND DESCRIPTION:

CD40, also known as bp50 or CDW40, is a type I membrane protein found on the surface of B cells and primary carcinomas. It belongs to the TNF-R family. CD40 serves as the receptor for CD40 ligand (CD40L), a cytokine expressed on the cell surface of T cells. CD40 plays a critical role in B cell proliferation, antibody class switching, modulation of apoptosis in the germinal center through interaction with T cells expressing CD40L, and activation of CD⁴⁺ T cells. Ligation of CD40 with its ligand preferentially induces stress-activated protein kinases in B lymphocytes.

APPLICATIONS AND USAGE:

The antibody can be used for Western blot analysis (0.5-4 µg/ml). However, the optimal conditions should be determined individually. Jurkat cell lysate can be used as a positive control. Blocking peptide (Cat.# 3178BP-50) is also available separately.

Cat.# 3178-100

Western blot analysis of CD40L expression with lysates from Jurkat cells (Lane 1), mouse small intestine (Lane 2) and rat kidney (Lane 3).

FOR RESEARCH USE ONLY! Not to be used on humans.
