

NF κ B p50 Polyclonal Antibody

CATALOG NO:	3354R-30T	30 μ g (Trial size)
	3354R-100	100 μ g
HOST:	Rabbit	
IMMUNOGEN:	Synthetic peptide corresponding to the N-terminus of human NF κ B p50 (Internal ID# BV-C15)	
SPECIES REACTIVITY:	Human, Mouse, Rat	

FORMULATION:

0.5 mg/ml rabbit anti-NF κ B p50 polyclonal antibody in phosphate buffered saline (PBS), pH 7.2, containing 30% glycerol, 0.5% BSA, 0.01% thimerosal.

STORAGE CONDITIONS:

Store at -20°C. For long-term storage, aliquot and freeze at -70°C. Avoid repeated freeze/thaw cycles.

BACKGROUND:

Nuclear factor kappa B (NF κ B) was identified as a sequence specific transcriptional activator that binds to the intronic enhancer of kappa light chain gene in B lymphocytes. NF κ B is a heterodimer that consists of a 50 kDa DNA binding subunit (p50) and a 65 kDa transactivation subunit (p65/RelA). Both of these subunits exhibit sequence homology to the protooncogene c-Rel. The p50 has an isoform called p49/p52, and both proteins are derived from the amino-terminal of precursor protein p105 and p100. The p50/p65 heterodimer remains in the cytosol in an inactive form as a complex with its inhibitor, I κ B. Upon stimulation of cells by a wide variety of stimuli such as lipopolysaccharide (LPS), pro-inflammatory cytokines (IL-1 & TNF, etc.), and viral infection, I κ B is phosphorylated and degraded by proteasome. The active NF κ B heterodimer is translocated into the nucleus and induces gene expression.

APPLICATIONS:

The antibody can be used for Western blotting (0.5-4 μ g/ml). However, the optimal conditions should be determined individually. Blocking peptide (Cat.# 3354RBP-50) is available separately.

Cat.#: 3354R-100

Western blot analysis of NF κ B p50 in lysate from 3T3 cells (Lane 1) and rat kidney (Lane 4).

FOR RESEARCH USE ONLY! Not to be used on humans.
