

Lck Polyclonal Antibody

CATALOG NO:	3498-30T 3498-100	30 µg (Trial size) 100 µg
HOST:	Rabbit	
IMMUNOGEN:	Synthetic peptide corresponding to the C-terminus of human Lck (ID# BV-413)	
SPECIES REACTIVITY:	Human, Mouse, Rat	

FORMULATION:

0.5 mg/ml antigen affinity purified rabbit polyclonal antibody in phosphate buffered saline (PBS), pH 7.2, containing 30% glycerol, 0.5% BSA, 0.01% thimerosal.

STORAGE CONDITIONS:

Store at -20°C. For long-term storage, aliquot and freeze at -70°C. Avoid repeated freeze/thaw cycles.

BACKGROUND:

Lck is a membrane associated tyrosine protein kinases. The Lck gene has been shown to undergo rearrangement and overexpression in some murine lymphomas. In human studies, it has been demonstrated that the Lck gene is localized to a site in the genome which undergoes frequent chromosomal abnormalities in lymphomas and neuroblastomas. Resting T cells contain high levels of the Lck protein and mRNA both of which decline upon activation of the T cells. These and other observations suggest that alterations in Lck expression may contribute to the pathogenesis of some types of neoplastic disease.

APPLICATION AND USAGE:

The antibody can be used for Western blotting (0.5-4 µg/ml). Based on researcher's feedback, it also works well in immunoprecipitation (20-25 µg/ml), and immunohistochemistry (20-25 µg/ml). However, the optimal conditions should be determined individually. Blocking peptide (Cat.# 3498BP-50) is available separately.

SPECIFICITY:

The antibody detects 56 kDa Lck protein from samples of human, mouse, rat origins. A low band ~25 kDa can also be detected, presumably to be a cleavage fragment of Lck.

Cat.# 3498-100
Lck Western blot analysis of Lck expression in rat kidney tissue lysate.

FOR RESEARCH USE ONLY! Not to be used on humans.
