

Anti-Canine Coronavirus Polyclonal Antibody

02/20

CATALOG NO.: A2070-100 (100 µg)

BACKGROUND DESCRIPTION: Coronaviruses (CoV) are a large group of enveloped positive-sense RNA viruses. They belong to subfamily *Coronavirinae*, in the family of *Coronaviridae*, of the order of *Nidovirales*. Coronaviruses infect a number of mammalian species such as dogs. Two types of Coronaviruses have been identified in dogs: CCoV type I, and CCoV type II. Both the types of viruses are eligible to be detected in the same dog, however, due to genetic recombination events, CCoV type II is further divided into two sub-types: CCoV type IIa and CCoV type IIb. About 20% of the canine coronavirus infections are of CCoV type I, whereas 44% of the infections are of CCoV type II. Coronavirus infections in dogs are limited to the intestine, and results in only mild enteritis.

ANTIBODY TYPE: Polyclonal

HOST: Goat

IMMUNOGEN: Canine Coronavirus nucleocapsid protein

PURIFICATION: Affinity purified

FORM: Liquid

FORMULATION: In 10 mM PBS, pH 7.2, 0.1% sodium azide

SPECIES REACTIVITY: Canine

STORAGE CONDITIONS: 2-8°C. Do not freeze

APPLICATIONS AND USAGE: ELISA, WB

Note: This product is not for diagnostic purposes. It is the sole responsibility of the user to assume care, control and custody of the material, and ensure appropriate disposal, as per all regulations.
