

Anti-Troponin I (85-92) Capture Antibody

04/20

CATALOG NO.: A2107-100 (100 µg)

BACKGROUND DESCRIPTION: Cardiac Troponin I (cTnI) is a cardiac regulatory protein, which regulates the interaction of actin and myosin in the presence of calcium. cTnI is exclusively present in the myocardium, unlike its counterpart Cardiac Troponin T (cTnT), that is found to be minimally expressed in skeletal muscles. Measurement of cTnI levels in the serum is indicative of the extent of damage to the cardiac muscle. cTnI levels in the serum are not visible until 4 hours after the onset of myocardial damage. Serum levels of cTnI indicative of myocardial infarction are in the range of 0.1 – 2 µg/litre.

ALTERNATE NAMES: cardiac Troponin I, Troponin I, cTnI

ANTIBODY TYPE: Monoclonal

HOST: CHO cells

IMMUNOGEN: Troponin I (epitope 85-92 aa)

PURIFICATION: >90%

FORM: Liquid

FORMULATION: In 10 mM PBS, pH 7.4, 0.1% Proclin 300

STORAGE CONDITIONS: Short Term 2-8°C, Long Term -20°C. Avoid freeze/thaw cycles

APPLICATIONS AND USAGE: Lateral Flow

Note: This product is not for diagnostic purposes. It is the sole responsibility of the user to assume care, control and custody of the material, and ensure appropriate disposal, as per all regulations.
