DESCRIPTION: E-64d is a synthetic analog of E-64 which is a membrane permeable inhibitor of lysosomal and cytosolic cysteine proteases. It inhibits cathepsins B and L in intact lysosomes and cells. It (20-200 µg/ml) induces cell cycle arrest at the G2/M phase in A431 human epidermoid carcinoma cells. E-64d inhibits the entry of SARS-CoV-2 into Caco-2 cells in combination with Camostat mesylate.

STORAGE TEMPERATURE: -20°C. Protect from air. Store under desiccating conditions.

HANDLING: Do not take internally. Wear gloves and mask when handling the product! Avoid contact by all modes of exposure.
