

ToxOut™ Endotoxin-free Collection Tube, 2.0 ml

rev 12/20

Cat. No.

7937-50 ToxOut™ Endotoxin-free Collection Tube, 2.0 ml, sterile, 50 Tubes

I. Description:

Endotoxin is the lipopolysaccharide (LPS) complex located in the outer membrane of gram-negative bacteria. During experimental procedures, large amount of endotoxins are shed and can easily contaminate labware, buffers and downstream products. Presence of endotoxin in any of these has a detrimental effect on culturing of cells and can lead to generation of irreproducible or negative experimental data. Therefore, it is critical to keep endotoxin away from samples and products.

ToxOut™ Endotoxin-free Collection Tube, 2.0 ml are screw cap microcentrifuge tubes that are recommended for samples with special requirement of endotoxin level (< 0.05 EU/ml). BioVision's Endotoxin-free tubes are strong enough for centrifugation up to 20,000 x *g* and suitable for use in vapor-phase liquid nitrogen storage, -80 °C freezers, boiling, and autoclaving.

II. Storage and Handling:

Store the tubes at room temperature.

Handle endotoxin free tube with extra caution to prevent endotoxin contamination from dust, solution or dirty labware.
