

K48-linked Tetra-Ubiquitin

CATALOG #: 6417-25 25 µg

ALTERNATE NAMES: UB4

PURITY: ≥ 95% by Western Blotting

MOL. WEIGHT: 34.233 kDa (Band migrates faster on gels)

FORMULATION: 1 mg/ml in 20 mM Tris-HCl, pH 7.5, 0.15 M NaCl and 1 mM EDTA

STORAGE CONDITIONS: Aliquot and store at -80°C. Avoid repeated freezing and thawing cycles.

DESCRIPTION: Poly-ubiquitylation of target proteins through linkage at K48, is now the most thoroughly studied of the various chain linkages, and was once considered the hallmark of this post-translational modification. It is now clear that many, if not all, poly-Ub chain topologies likely play distinct and important roles in regulating cellular processes. Nevertheless, K48 linkage remains a critical pathway for the cells to maintain homeostasis through proteolytic degradation, and as such remains very intriguing for the study of DUBs that play a role in the degradation, as well as the proteasome itself. These tetra-ubiquitin chains are generated from the enzymatic linkage (E2-25K) of wild-type ubiquitin through lysine 48. The most distal ubiquitin contains an arginine substitution for a lysine at position 48, limiting the chain length.

Immunoblot analysis of ubiquitin chain with a mouse monoclonal antibody, followed by Anti-mouse IgG-HRP and detection by ECL. Ubiquitin chain mass was also verified by LC-MS.
