

# IL-29, Human CellExp™, human recombinant

**CATALOG #**: 6473-10 10 μg

6473-50 50 μg

ALTERNATE NAMES: Interleukin-29, IL-29, IFN-Lambda 1, Interferon-

Lambda 1, Cytokine ZCYTO21, IL29, IFNL1,

ZCYTO21.

**SOURCE:** Human 293 Cell Expressed

**PURITY:** > 95% by SDS - PAGE

MOL. WEIGHT: 29 and 35 kDa, monomer, glycosylated

**ENDOTOXIN LEVEL:** < 1.0 EU per 1 μg of protein

**FORMULATION:** Lyophilized in PBS.

**RECONSTITUTION:** Reconstitute in sterile PBS containing 0.1%

endotoxin-free recombinant human serum albumin.

STORAGE CONDITIONS: Aliquot and store at -20°C or -70°C. Avoid repeated

freezing and thawing cycles.

## **ADVANTAGES:**

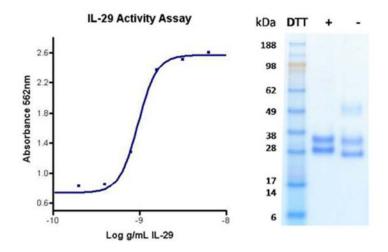

- Animal-derived product free
- High Activity
- Authentic Glycosylation

### **DESCRIPTION:**

IL-29 is distantly related to type I interferons and the IL-10 family. Expression of IL-29 is induced by viral infection which interacts with a heterodimeric class II cytokine receptor that consists of interleukin 10 receptor  $\beta$  (IL10RB) and interleukin 28 receptor  $\alpha$ . IL-29 exhibits common features with type I IFNs such as antiviral activity, antiproliferative activity and in vivo antitumor activity. IL-29 acts similarly to IFNs, but is less effective generally and has activity in a more limited range of cell lines. IL-29 produced in response to viral infection, activates both monocytes and macrophages producing a restricted panel of cytokines and therefore is an important factor in activating innate immune responses at the site of viral infection. IFN-Lambda 1 antiviral and antiproliferative activity requires Interferon-Lambda 2 receptor tyrosine

#### **BIOLOGICAL ACTIVITY:**

ED<sub>50</sub> is typically 0.5 to 5 ng/mL. The specific activity was determined by the dose-dependent protection of the cytopathic effect on A549 cells (human lung adenocarcinoma epithelial cell line) that were challenged with encephalomyocarditis (EMC) virus.

Human Cellexp Human Recombinant IL-29

#### **RELATED PRODUCTS:**

IL-29, human recombinant (Cat # 4981-20, -1000)
