

MERS-CoV Spike S2 Protein

11/20

CATALOG NO:	P1624-10 10 µg P1624-50 50 µg
ALTERNATE NAMES:	Middle East respiratory syndrome coronavirus; Human betacoronavirus 2c EMC/2012; Middle East respiratory syndrome-related coronavirus; S glycoprotein; EMC/2012; E2; Peplomer protein; Spike protein S2
MOL. WT.	60.7 kDa
ACCESSION NO:	K0BRG7, AFS88936
PURITY:	≥ 85% by SDS-PAGE
SOURCE:	Baculovirus
ENDOTOXIN:	< 1 EU/µg of protein as determined by LAL method
TAG:	HisTag
AMINO ACID SEQUENCE:	The target protein is expressed with the sequence (aa 752-1296) of MERS-CoV spike protein S2 fused to His-tag at the C-terminus.
FORM:	Liquid
FORMULATION:	In Phosphate-Buffered Saline (pH 7.4) containing 10% glycerol.
STORAGE CONDITIONS:	Divide into small aliquots and store at -20 °C or -80 °C. Avoid repeated freeze-thaw cycles.
DESCRIPTION:	MERS-CoV is a coronavirus which causes the Middle East Respiratory Syndrome (MERS). MERS-CoV has four structural proteins, known as the S (spike), E (envelope), M (membrane), and N (nucleocapsid) proteins. The spike protein is responsible for allowing the virus to attach and fuse with the membrane of a host cell. Spike glycoprotein is cleaved into three chains: S1, S2' and S2. S1 mainly contains a receptor binding domain (RBD), which is responsible for recognizing the cell surface receptor. S2 contains basic elements needed for membrane fusion. MERS-CoV S mediates viral attachment and fusion to human cells via human cellular receptor DPP4, also known as CD26. The S protein plays an important role in the induction of neutralizing-antibody and T-cell responses, as well as protective immunity.

Fig A. 3 µg of MERS-CoV Spike S2 protein was loaded on SDS-PAGE under reducing conditions and visualized by Coomassie blue stain.
